A Statement By The Supervising Principal

School buildings such as the one dedicated today are vehicles for the most significant activity that a community can engage in, the education of community's children. No other function or service is as far reaching in its implications and values as that of education.

This building is dedicated to be used to educate the coming generations of children of the BURGESSTOWN AREA SCHOOL DISTRICT. Much flexibility and functional use has been designed into this facility. The possibilities for total learning will be limited only by the imagination and initiative of the students, faculty and patrons.

The 1963 model of the BURGESSTOWN AREA SCHOOL DISTRICT'S educational vehicle is yours and your children's; use it in good health and prosperity in a free America and a free world.

Dr. James J. Tinney
